

New Employee Guide

This guide gives new hires an enterprise-level overview of company expectations, support channels, communication norms, and first-month success measures.

Department: Onboarding | Version: 1.1 | Owner: Matthew Gardner, Talent Enablement Lead

Access Level: Internal - All Employees | Created: 2024-01-28 | Updated: 2024-05-15 | Source File: onboarding_new_employee_guide_v1.pdf

1.0 Purpose

The new employee guide helps a new hire understand how the company works before role-specific detail is layered on top. A strong onboarding document should answer where information lives, how work is coordinated, which systems matter first, and how a new employee can ask for help without losing momentum during the first month.

The guide also creates alignment between managers, onboarding buddies, and support teams. It sets a baseline experience that can be scaled as the company grows, making onboarding knowledge easier to retrieve, maintain, and evaluate in a production-ready RAG environment.

2.0 Scope

This guide applies to all new employees joining the company, regardless of department, location, or working model. Department handbooks provide role-specific expectations, but the operating principles described here should remain consistent across the organization.

The content covers first-day orientation, company working norms, first-month expectations, support channels, and the communication habits that help new hires become productive without relying on undocumented tribal knowledge.

- Applies to remote, hybrid, and office-based hires.
- Complements department onboarding plans and manager-created 30-day goals.
- Does not replace security training, legal acknowledgements, or job-specific certification requirements.

3.0 Responsibilities

The responsibilities below define who must act, approve, review, and maintain records so the process can be executed consistently across teams and audit periods.

3.1 New Hires

- Review shared onboarding materials, complete required training, and ask clarifying questions early.
- Confirm access to core systems and report blockers through the approved support channel.
- Use written notes, task systems, and documented follow-ups to build role understanding deliberately.

3.2 Managers

- Translate the company-level guide into role-specific priorities, meetings, and early deliverables.
- Provide clarity on decision-making, escalation, and the team's working cadence during the first week.
- Hold regular check-ins so confusion is resolved before it becomes a performance concern.

3.3 Onboarding Partners

- People Operations, IT, and onboarding buddies should help the new hire navigate systems and company norms.
- Each partner is expected to answer questions within the defined support model and route unresolved issues appropriately.
- Shared onboarding trackers should remain current so missing tasks are visible and owned.

4.0 First-Day Experience

The first day should orient a new hire to the company's mission, structure, and practical way of working. Employees should leave the day knowing who their manager is, what success looks like in the first month, where critical systems live, and how to get help when something is unclear.

A good first day is not overloaded with low-priority detail. It balances administrative setup with contextual information that helps the employee understand the company's products, team interactions, and documentation culture well enough to start absorbing role-specific knowledge.

- Attend orientation and review the employee handbook, security policies, and communication norms.
- Meet the manager, onboarding buddy, and immediate teammates.
- Confirm email, calendar, chat, HRIS, task tracking, and department documentation access.

5.0 How the Company Operates

Most teams rely on written communication, transparent task ownership, and durable records of decisions. Employees should use shared documents, tickets, and meeting notes rather than relying on private messages or undocumented verbal agreements that are difficult for others to retrieve or review later.

Work is expected to move through visible systems with owners and due dates. New hires should learn the habit of posting updates, recording meeting outcomes, and escalating blockers early so the team can act before delays affect customers or internal commitments.

5.1 Communication Norms

- Use chat for quick coordination, documents for durable decisions, and email for formal updates.
- Assume positive intent, but raise risks clearly and with enough context for action.
- Capture outcomes with owners and dates after any meeting that changes priorities or commitments.

5.2 Execution Norms

- Track work in the approved task system rather than maintaining personal side lists only.
- Ask for clarification when requirements are vague rather than making hidden assumptions.
- Escalate dependencies early if they may affect launch dates, customer promises, or compliance work.

6.0 First 30 Days and Support Channels

During the first month, each employee should understand core workflows, meet key cross-functional partners, and complete at least one scoped piece of work with increasing independence. The goal is not perfection, but visible progress supported by documentation, feedback, and practical access to the right systems.

Support channels should feel easy to use. Employees should know that questions about payroll, benefits, devices, application access, security concerns, or process ambiguity belong in shared support workflows where ownership is clear and response times can be measured.

- Complete all mandatory compliance and security training within the required window.
- Read the department handbook, current roadmap, and the SOPs that affect the role.
- Use People Operations for HR topics, IT for system access, and the manager or buddy for team-specific guidance.

7.0 Exceptions and Escalation

Any onboarding experience that materially differs from the standard model should be documented with a reason, owner, and follow-up action. This includes delayed equipment, temporary manual workarounds, role changes during onboarding, or critical systems not being available by the planned date.

Escalate immediately when a new hire cannot access required systems, lacks a confirmed manager or role plan, or is blocked from completing mandatory compliance tasks. Delays in the first week compound quickly and should be treated as operational issues, not informal inconveniences.

8.0 Records and Review

Orientation completion, assigned trainings, access confirmations, and key onboarding checkpoints should be stored in approved onboarding trackers or HR systems. Managers should avoid relying only on private notes for first-month progress.

The guide is reviewed quarterly against onboarding feedback, access issue trends, and manager observations. Major updates should be made whenever the company changes core systems, communication norms, or compliance expectations.
